

QUANTITATIVE WITNESSES FROM THE FINAL LOGS

Sample sequences exist only for FIT_ROW; other panels preserve the logged summary statistic.

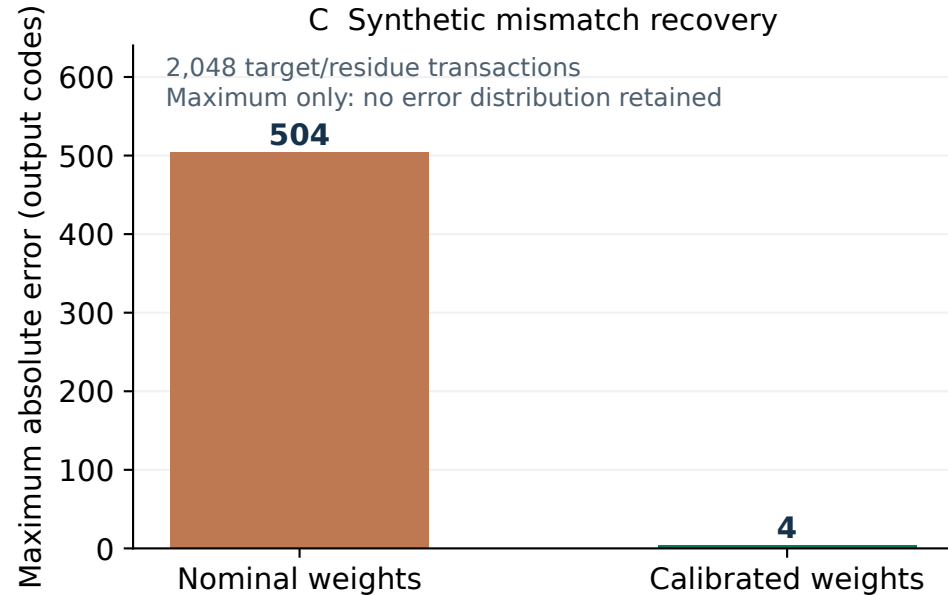

A External-fit holdout: 128 actual rows

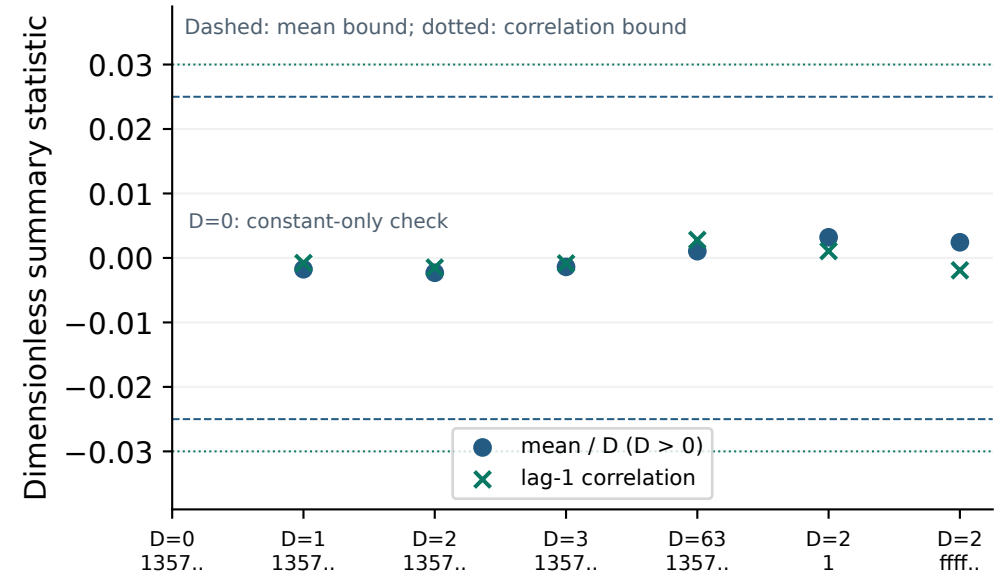

B Exact holdout residual and metadata

C Synthetic mismatch recovery

D Dither: seven logged conditions

A/B: log-level bit-exact replay. C: behavioral mismatch fixture. D: finite-sequence statistical regression.

No waveform was reconstructed from a PASS line. These plots do not establish SNDR, ENOB, silicon PPA or STA.
