

QUANTITATIVE WITNESSES FROM THE CI LOGS

A/B use 128 actual FIT_ROW records; C/D preserve the logged summary statistics.

21 RTL benches passed; independent arithmetic audit passed

RTL CI job succeeded; workflow conclusion is separate

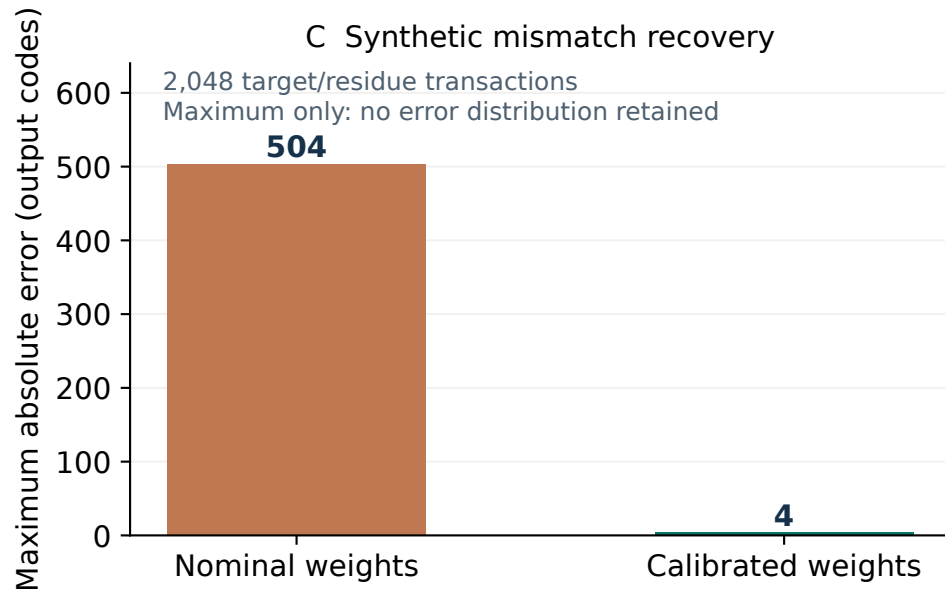

A External-fit holdout: 128 actual rows

B Exact holdout residual and metadata

C Synthetic mismatch recovery

D Dither: seven logged conditions

A/B: log-level bit-exact replay. C: behavioral mismatch fixture. D: finite-sequence statistical regression.

No waveform was reconstructed from a PASS line. These plots do not establish SNDR, ENOB, silicon PPA or STA.
